This report shall not be reproduced, except in its entirety, without written approval from Kaycha Labs. This report is an Kaycha Labs certificate. The results relate only to the material or product analyzed. Test results are confidential unless required by relevant authorities. Void after 1 year from this test date. Cannabinoid content of dried material may vary depending on sampling error. ND = not detected. NT = Not tested. LOQ = Limit of Quantitation. Determination of Moisture Analytes: g/100g = Mg, Mg/Kg, ppb = Parts Per Billion. Limit of Detection (LOD) and Limit of Quantitation (LOQ) are limits used to describe the sensitivity of an analytical method that can be reliably measured by an analytical procedure. Some reproducibility of Fail measurements, Action Levels are "limits declared by a testing laboratory for a contaminant, above which no product can be sold unless remediated. Safety for consumption and/or inhalation. The result is 95% Confidence Level uncertainty of measurement. LOQ for the analyte. The Uncertainty is usually from the lab upon request. The "Decision Rule" for the results does not include the UM. The Limit of Detection is 5. Pass Limit: 0.1%
